-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

- 6) ☐ Other: ____.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Sun et al (4,158,449).

Re – Claims 1-5: Sun et al disclose an on-board, ventilating airflow management system comprising an air intake spaced from the device and disposed to intake a flow of air under circumstances with the aircraft engine operating, elongate fluid-flow conduit structure having an intake end disposed adjacent said air intake for receiving an airflow therefrom, a discharge end located adjacent said zone for directing there into the airflow received at the conduit structure said intake end, and a fluid-flow path extending between and communicating with said ends, said conduit structure being connected and disposed to assume substantially the full responsibility for the delivery of flowing air into said zone, (see figure 1) particulate structure operatively disposed in said conduit structure said path, intermediate said intake and discharge ends, said filter structure being adapted to prevent particle passage into the mentioned electrical sliding-contact zone (10), a velocity modifying flow expansion chamber which reduces airflow velocity (5), wherein said conduit structure intermediate it's said intake and discharge

ends further includes liquid trap and drain structure, wherein said trap and drain structure is gravity operated (col. 7, lines 10-13).

Re – Claims 6-10: Sun et al disclose a method comprising intaking, during operation of the aircraft engine, a flow of air at an airflow location which is functionally upstream from the location of the generating device, (Figure 1), filtering the thus intaken flow of air to block the passage of the particulates entrained in that flow, thus to create a filtered airflow (10), directing the created, filtered airflow into the mentioned electrical sliding-contact zone in a manner whereby the filtered airflow is substantially all of the ventilating airflow which enters the zone (see Figure 1 and #10).
